

MULTISTEM  
TREES

## MULTISTEM TREES

---

**M**ultistems are very individual, sometimes curious looking trees and can have great impact on their own or planted as clusters and groups. They have proved increasingly popular over the last few years and we've seen them used in a great variety of situations from the entrance to grand hotels to the creation of enchanting coppices.

In particular Osmanthus is much sought after and these are available as 'mushroom or umbrella' shaped multistems with tightly clipped domes. See page 109.

*\* Please note some of our multistems are grown in peat, so if your requirement is for a National Trust project, please check with us before ordering.*

MUSHROOM / UMBRELLA SHAPED OSMANTHUS
