ABOUT US

Kingsdown is an established trade nursery providing mature trees, hedging, topiary and feature plants to the people who are designing and building Britain's finest gardens.

We are a friendly and close-knit team of people. You will find us professional but at the same time approachable, easy to work with and with a great passion for sharing the accumulation of knowledge built up over the last 60 years in horticulture.

Our industry experience combined with a deep-seated culture of care allows us to support the professional in a way that is not always easy to find. Our speciality lies in the supply of plants and trees for instant gardens where quality and value are the most critical factors. All appropriate sundries are available meaning that the full package can be delivered to exactly where and when you need it.

We recognise that quality plants is not the only thing our customers need and you can be assured of our full and enthusiastic support at every stage in the process with advice, guidance and backup all along the way.

Wiltshire Downs

OUR BEGINNINGS

Captain William Whiteside's clipper 'Minnie Sommers'

Our story begins in the heart of the Marlborough Downs, those ancient and rolling chalky uplands where farmers and sheep traders have made a living for ages of time. This is the wild and windswept landscape that shaped the childhood of founder David Whiteside, and where he returned after the Second World War to grow his family business.

Further back still, David's great Grandfather was a captain in the Merchant Navy and ran his vessel and small fleet back and forth across the British Empire trading various goods from far flung corners of the globe.

So, we don't sail ships anymore, trade sheep or farm but we do enjoy doing business with many of England's finest Garden Designers, Landscape Architects, The National Trust, Royal Parks and Large Private Estates.

Here we are then, half a century later, sailing on... A new generation at the helm but the same pioneering spirit is drawing us ever onward...

Welcome aboard!

SALES ADVISORY TEAM

If you have an enquiry these are the people you will talk to on the telephone or who will respond to your emails. They will provide advice, quotations, take your orders and do all they possibly can to make your interaction with Kingsdown a worthwhile and enjoyable experience.

OPERATIONS TEAM

Operations at Kingsdown is hard graft. Out in all weathers this team work tirelessly to get your orders picked, sorted, quality checked and delivered on time in full. But with a cheerful 'can do' attitude the most awkward of loads become just another opportunity to put their skills to the test. When your order is ready someone from Operations will be in touch with you to organise delivery.

PURCHASING

Constantly liaising with our growers, organising fresh shipments of plants and juggling deadlines and customs and import declarations, the purchasing team keeps the ship sailing smoothly on...

FINANCE

Along with preparing budgets, forecasting and figures analysis the finance team run the day to day accounts and will be your point of contact for any queries relating to payment of orders.

OUR CUSTOMERS

GARDEN DESIGNERS & LANDSCAPERS

Kingsdown has a lot to offer the professional designer who enjoys working with a wide palette of mature plants and trees. The Seasonbook is primarily centred around the needs of Garden Designers and Landscapers and helps to inspire and shine a light on the fascinating range of mature stock available.

We're very approachable sort of people and have a genuine care for the Landscaper's or Designer's needs and a deep understanding of how critical quality is when it comes to building or renovating a garden. Nearly all of our team have been in horticulture throughout their career as nurserymen, landscapers or garden designers, so we offer sound practical advice and guidance based on experience.

Garden Designers often ask us to find them an approved contractor to help build their gardens. We are more than happy to help in this connection and many new and effective working relationships have been formed in this way.

GARDEN DESIGNERS WORKING WITH KINGSDOWN

“When meeting client expectations is paramount, I consider Kingsdown a key part of my team. At worst, the plants are as expected; nine times out of ten they are better. Deliveries come when they say they will with the correct quantities and their prices are really competitive. Nothing is too much trouble and their reliability means one of the key stresses of the job is removed – clients are happy, contractors are happy and the project looks amazing!

I can’t commend Kingsdown highly enough.”

Jonathan

“Kingsdown have always been very supportive, courteous and offered tremendous help to us every time we place an order or have a quote request. Even when things have not quite gone to plan Kingsdown have always had a solution and been very quick to resolve any issues albeit this has been on a very rare occasion.

The plant prices and quality have always been excellent; this has led to us earning more business on the back of other successful jobs. I feel we are more competitive using Kingsdown in our projects than with other suppliers.”

Steve

“I have been doing my job for 17 years and over this time I have had to deal with a large number of suppliers, particularly plant growers and nurseries. Without exception they have been unreliable and difficult to deal with. These include some of the really high profile growers in the UK...

Kingsdown in my opinion has the edge on customer service, reliability, speed of quotes (helps hugely and is very efficient meaning I can quote quickly and 9/10 I get the job) really good delivery reliability – this is absolutely key to us efficiently delivering our promise to our clients and I have been badly let down in the past with 9am deliveries arriving at 3pm and worse.

Your plants are excellent. Nothing feels like too much bother and I have appreciated your support over my catastrophic project in M.....n!”

Emma

BUILDERS & PROPERTY DEVELOPERS

An increasing number of property developers now consider carrying out their own soft landscaping works but we've learnt from those we work with that sourcing the trees and plants can sometimes feel very confusing. Plants are not developers main line of knowledge, usually subsidiary to the main project in hand and there may appear to be an endless choice of varieties and specifications. With our friendly and professional guidance, we will take the developer through the necessary steps and help turn what may have been a headache in to a simple and profitable addition to the enterprise.

Development projects we work on are normally in the high-end domestic sector ranging from Cotswold Cottages to large properties worth £30M or more.

If necessary we are happy to put developers in touch with Kingsdown Approved Landscape Contractors. Along with this we can also bring Approved Garden Designers to the table who will offer the full package from concept and project management through to completion. Alternatively, the Garden Designer can simply produce the landscape design and leave the project management and plant sourcing to the developer.

A PROPERTY DEVELOPER WORKING WITH KINGSDOWN

“It is always a pleasure to work with the team at Kingsdown Nurseries and as property developers in the high-end market we have found them a perfect fit for our planting requirements. The customer service is consistently polite, friendly and knowledgeable, the quality of the plants in our experience is excellent and the deliveries are punctual. We are keen to offer repeat business to like-minded companies and continue to return to Kingsdown time and time again for our landscaping needs.”

Prudence

ESTATES & THE NATIONAL TRUST

As an approved National Trust supplier we know that we have high expectations to meet in quality, reliability and trust. Along with National Trust properties some of the most notable private estates in the country come to us for their feature plants, trees, hedging and landscaping sundries. Our Estate customers range from Royalty, Royal Parks and peers to comedians and world-famous musicians.

Our staff have a wealth of landscaping and project management experience which we are delighted to share in a helpful and approachable way. We are happy to make site visits where necessary but we do not make suggestions related to the garden design. We are also very willing to put Estate owners or managers in touch with Kingsdown approved Landscape Contractors or Garden Designers to ensure the project has the best possible chance of complete success.

Plant supply for Estate landscaping projects we are involved in ranges from approximately £5,000 up to £300,000 or more. Our experience, contacts and ability to deliver in full, on time mean that we bring confidence and efficiency to those working with a large budget and high expectations.

Unless marked with (P) every plant in this book is peat free.

AN ESTATE WORKING WITH KINGSDOWN

Comments from Assistant Park Manager, Regent's Park, London

“When we decided to install a new *Taxus* topiary feature at Regent's Park, Kingsdown Nurseries went the extra mile, providing over a period of months many photographs and dimensions of the type of topiary they could supply until they finally found what I was looking for. From then on the process of getting the plants on site (particularly as this coincided with COVID-19 lockdown) was extremely smooth, with the plants well protected during transport.

The stock when it arrived looked even better than the photographs provided for my final selection and were exactly of the size and specification we asked for. They were very helpful in discussing suitable backfill material for the plants to quickly establish and responded to my enquiry about the benefits of using an anti-transpirant spray, suggesting a product I could try.

I would certainly include Kingsdown Nurseries in my list of companies to approach for any future large topiary or hedging material tenders and would suggest to colleagues that they consider Kingsdown Nurseries for any plant purchases, particularly large hedging and topiary.”

ANONYMOUS

We often find ourselves dealing with the contractors or staff of people who wish to remain anonymous because of who they are. We respect this and understand how important privacy can be to high net-worth clients or people who are globally recognisable. In these situations, we act with the utmost tact and discretion to ensure complete confidentiality and the safety of these people and their families.

We also realise that any compromise may reflect on the contractor and we work to protect their reputation as much as we do our own.

ANONYMOUS WORKING WITH KINGSDOWN

.....

“We have been ordering from Kingsdown since February 2018 and found them to be consistently honest and easy to work with. With their knowledge and input and wide range of structural plants we have been able to complete some impressive projects on the estate. The stock supplied is of excellent quality but where there has occasionally been issues with plants or delivery arrangements staff have been very accommodating and resolved problems promptly and fairly.

The service is impeccable.”

GENERAL PUBLIC

Kingsdown Nurseries are strictly wholesale only and do not sell directly to the general public.

If you are a member of the general public and find yourself wishing to work with us on your next project – rest assured, you are not alone! We are approached almost on a daily basis by non-trades people wanting to work with us and whilst we will never discuss prices or project details with the general public, we are very happy to suggest approved designers or landscapers who we feel reflect our company values. Alternatively, you may request extra copies of this book (as many as you like) to pass on to your garden designer or landscapers so that they can see what we do and begin dialogue with us about your project requirements.

To order extra copies of the Seasonbook please visit our website www.kingsdown-uk.com and you will find the order form at the bottom of the homepage. There is no charge for the Seasonbooks.

THE PROCESS

Ordering is easy. We'll do our very best to make things as simple and as efficient as possible for you. We understand that you probably won't find all the answers in this book and that is why we have a team of dedicated and enthusiastic helpers ready to assist you with any query you may have. The following process is normally how it goes from here...

- **Your Initial request.** This could take the form of a full planting schedule of varieties, quantity and specification – or, (as is often the case with property developers and landscape architects) send us the plans and we'll quote from the bill of quantities (please ensure these are clearly identifiable). Your enquiry details may be submitted via our website or by email sales@kingsdown-uk.com. Of course you are also very welcome to call us or to visit and discuss requirements at our offices.
- **Kingsdown Quotation.** We have a team of six who are constantly sourcing, quoting and working with our customers to fulfil their requirements within budget. Once we have received your planting list we will formulate our quotation. If the items are not in stock at our nursery we will begin dialogue with our growers and source quality plants to the correct specifications. If required we will offer alternative size options and should substitutes be necessary these will be clearly shown on the quotation.
- **Order.** Once our quotation has been accepted and the order confirmed we send an order acknowledgement to be approved and will immediately reserve the stock required. For payment see page 166.
- **Delivery.** As soon as your order is complete you will be contacted by our transport team to book in the earliest delivery date that works for you. Delivery is nationwide and normally available within ten to fourteen working days from the date of order. Charges are at cost or free at our discretion on large orders and unless asked otherwise we will send an unpriced delivery note with every delivery. We work closely with a local haulier and the delivery fleet consists of 13 articulated trucks, 26 rigid trucks and of these 15 are available with moffat forklifts which can be a huge help on site when we are offloading mature plants or large quantities of pallets. Along with these we have vans and 7.5 ton trucks also available. Orders under £300 plus VAT are collect only.

Call Us on 01793 700 997 Monday to Thursday 7:30am to 4:45pm, Friday 7:30am to 4:00pm

Email Us: sales@kingsdown-uk.com

Visit Us at Kingsdown Nurseries, Kingsdown Lane, Blunsdon, Swindon, Wiltshire, SN25 5DL Monday to Thursday 7:30am to 4:45pm, Friday 7:30am to 4:00pm. *Please note that general public may only visit if accompanied by their landscaper or garden designer.*

PLANTS AND TREES

We think providing plants for instant gardens is a fascinating business. From one day to the next it is quite impossible to predict what we'll be asked to supply. Of course, there's always the rootballed hedging and standard trees etc. but plants can vary so enormously – from monstrous avenue trees, ornate topiary, through to much smaller specimens, each needing care and handling in different ways.

This chapter will take you through the various categories of plants that we provide, showing photos of specimens at our nursery or in the projects supplied as well as an indicative list of the varieties and sizes usually available. Our best attempt on these pages really can't do justice to all the amazing plants that pass through our hands but we trust it is informative and perhaps inspirational for designs or projects you may currently be working on.

TOPIARY.....	p31
HEDGING.....	p41
SPECIMEN SHRUBS	p67
TREES.....	p73

TOPIARY

Topiary has been used in the gardens of Europe since Roman times. It survived a popularity decline in the 1700s and experienced a dramatic revival in the mid 19th century, from which it has not regressed. In fact, Topiary today is more popular than ever and found in a huge number of British gardens from the smallest spheres to stately works of art that are often decades in the making.

At Kingsdown we have had the pleasure of being involved in supplying topiary for many fascinating projects and in the following pages you will get a glimpse of what is available to stir your imagination.

Along with mature hedging, large unusual topiary and feature plants are really what we are best at. We source these shapes from specialist growers all over Europe and availability and quality is checked before we quote for each item. There are rarely two enquiries alike for such diverse plants so each query is assessed and quoted for on an individual basis.

Topiary from Kingsdown

KEY FACTS

Available: Rootballed Topiary is available from October to early/mid April.

Delivery considerations: Large topiary specimens can be very heavy and may require machinery for offloading and planting.

Min quantity: None

Related Products: Tree & Shrub Compost, Rootgrow mycorrhizal, Rootball anchoring system, Root Irrigation.

HEDGING

Instant Hedging Blocks.....	p43
Instant Hedging Troughs	p47
Rootballed Hedging	p53
Bareroot Hedging & Forestry.....	p59-64
Native Country Hedge Mix (Bareroot).....	p60

INSTANT HEDGING BLOCKS

Instant Hedging Blocks are field grown rootballed plants that have been carefully clipped into square sided columns and can be up to 100cm wide and 400cm tall or more depending on your specification.

Planted continuously they form a hedge that looks as though it may have been growing there for 30 years. These are truly the best option should you want an 'instant hedge'. Of course, these superb plants also make stunning features in their own right planted as single specimens, groups or lining a drive. The following pages show them in our yard at Kingsdown and in situ as well.

Instant Hedging Blocks at Kingsdown

KEY FACTS

Available: Available from September to early/mid April.

Delivery considerations: Instant hedging blocks can be very heavy and unwieldy, normally requiring machinery for offloading and planting.

Min quantity: None

Related Products: Tree & Shrub Compost, Rootgrow mycorrhizal, Rootball anchoring system, Root Irrigation system.

INSTANT HEDGING TROUGHS

These perfectly finished hedging units are proving extremely useful and are in more demand than ever before.

The plants are always very strong and healthy with an excellent root system which is undercut regularly ensuring virtually zero loss if planted, maintained and irrigated properly. These units are all 100cm long by 40cm wide and come in a selection of heights.

Instant Hedging Troughs at Kingsdown

KEY FACTS

Available: All year round. (Not all varieties listed here are available all the time.)

Delivery considerations: Each unit weighs approximately 130-150kg + so machinery or significant strength is required for planting and moving around site. The delivery vehicle will normally have a tail-lift for unloading. Instant hedging units are nearly always supplied palletized.

Min quantity: There is no minimum order quantity. However, there are 3 units per pallet so it is always more cost effective to order in multiples of 3 if possible.

Related Products: Tree & Shrub compost, Rootgrow mycorrhizal. Irrigation is included free of charge with our Instant Hedging Troughs.

Installation & Dimensions

The units are very easy to install and come in biodegradable cardboard containers. There is no need to take the plants out of the containers, simply drop them straight into the trench and back-fill as normal. If you are planting in spring or summer it would be advisable to run a simple irrigation system along the hedge line. Every order comes with free irrigation pipe.

- **The working length per unit is 100cm - remember when ordering.**
- **Dig trench to a minimum of 35cm wide and 35cm deep.**
- **Ensure the top of the biodegradable cardboard box is just below the soil level.**

Carpinus betulus Available heights: 80 | 120 | 150 | 200cm

Elaeagnus ebbingei Available heights: 180cm

Fagus sylvatica Available heights: 80 | 120 | 150 | 200cm

Prunus laurocerasus Genolia Available heights: 180 | 200cm

Prunus lusitanica Angustifolia Available heights: 150 | 180/200cm

Taxus baccata Available heights: 80 | 120 | 150 | 180/200cm

Thuja plicata martin Available heights: 200cm

ROOTBALLED HEDGING

Rootballed Hedging plants are grown in the field and are in effect 'crops' that are harvested to order. And like other crops there is a window of opportunity for harvest and planting. After being carefully tended, clipped and fertilized throughout the summer, lifting normally begins in late October and continues through to April. Conifer types, however are often available earlier (September) and are usually still being lifted in May depending on how cool the weather stays. The longer it stays cool the longer the season lasts.

Rootballed hedging will have developed more slowly than container-grown options resulting in stronger, fuller plants ideal for mature looking hedges or single specimens.

Taxus baccata is our best-selling item from this range, thousands gracing the gardens of stately homes up and down the country as well as high end business parks and commercial properties. Rootballs are normally presented in two different formats. With smaller sized plants the rootballs are simply wrapped in hessian. We supply larger plants with their rootballs wrapped in hessian, which are then encased in wire mesh and tensioned up to form a firm rootball that is more resilient to knocks and movement. This also makes the plants much easier to handle as hooks can be used to move them or lift them into place. While wire rootballs are so practical, they do of course cost more to produce and if you are comparing quotes that show a significant difference in price for what appears to be the same sized plants, it is well worth checking with your supplier what rootballed type they are quoting for. Hessian and wire should never be taken off the rootballs before planting as you will risk damaging the roots. The wire is not galvanized and will rust away quite soon leaving the roots free to grow as they please.

In the following pages our wire-rootballed plants are indicated with **'WRB'** in the margin.

Rootballed Taxus hedge supplied by Kingsdown

KEY FACTS

Available: Rootballed hedging is available from October to early/mid April. Some evergreens are available from late September.

Delivery considerations: The smaller sizes are mostly delivered palletized - but not always. Very large rootballed hedging plants are delivered loose and can be heavy and require some patience and machinery to offload.

Min quantity: None

Related Products: Tree & Shrub compost, Rootgrow mycorrhizal.

BAREROOT HEDGING & FOREST TREES

Every winter Kingsdown supply miles of English grown barerooted hedging and thousands of forestry trees to projects all over the UK. These plants are carefully packaged and efficiently delivered straight to site anywhere in the UK.

Our most popular item in this range is Kingsdown's own 'Native Country Hedge Mix'. This comprises an attractive mixture of native shrubs which will produce a stock proof hedge full of colour as well as food for wildlife. The mixture complies with government grant schemes and is a great favourite with Farmers, Estates and Habitat Specialists.

Most hedges or forestry plantations will need rabbit or deer protection – see page 122.

Native Hedge

KEY FACTS

Available: Mid November to the end of March/early April.

Delivery considerations: Smaller orders are normally delivered on pallets and will be charged at the prevailing pallet delivery rate. Orders can be collected but only when pre-ordered. Cash and carry service is not available for bareroot hedging and forest trees.

Min quantity: Unless the plant is marked with * in the margin there is a minimum order quantity of 25 per variety.

Related Products: 90cm Canes, Spiral Rabbit Guards, Tree Shelters, Tree Shelter Stakes, Mesh Guard, Rabbit Netting, Rootgrow mycorrhizal.

NATIVE COUNTRY HEDGE MIX

The following rural hedge mix will make a dense hedge of mainly thorn, with other species added to provide interest and a good natural habitat for wildlife.

These should be planted in clean ground in a double row, with plants staggering those in the adjacent row. The rows should be 30cm apart and the plants 40cm apart in each row, making a total of 5 plants per metre. Spiral rabbit guards and canes are recommended.

Planting Guide for Kingsdown Native Country Hedge Mix

Correctly planted and maintained, Kingsdown Native Country Hedge Mix will produce a colourful stock proof hedge with attractive flowers and berries.

Ground Maintenance: The hedge line should be sprayed with a suitable herbicide a few days before planting to kill grass and pernicious weeds.

Planting Timing: Planting should take place as soon as possible after delivery. Plants should be kept in their bags until just before planting. Do not set out long sections of hedge leaving plants exposed. If planting cannot be done within a week the bundles should be 'heeled in' to a trench.

Spacing: Plants are spaced at 5 per metre.
This is a double staggered row. The rows should be 30cm apart and the plants 40cm apart within the rows.

Mix Ratio: To get a mix of species throughout the hedge use the following formula: - for every 4 metres of hedge use 12 Hawthorn, 2 Blackthorn and one of each of all the other species.

Planting Method: When planting through grass, first make a vertical cut into the turf. Then insert your spade to full depth at the base of the cut, lever back on the spade handle. The cut will now open up. Lift the spade blade slightly, put the plant behind the spade to the bottom of the hole. Slip it round to the centre of the cut, pull up slightly to the original soil level mark and tread in firmly, keeping the plant upright.

Trimming: The plants will grow bushy more quickly if a third of the growth is cut back when planting. This can be done while they are still in bundles. If planting where ground conditions become very dry or if planting late in the season plants can be trimmed harder to give a greater 'root-to-shoot' ratio.

After Care: It is very important that the hedge is kept free of weed competition by spraying or using mulching materials until it is well established. This will greatly increase survival rates and growth performance. When trimming the hedge as it matures keep it slightly wedge shaped (wider at the bottom.) This ensures that the light will reach the hedge all the way down and will prevent it becoming thin at the bottom.

Rabbit Protection: Spiral Rabbit Guards with canes to support them should be used if rabbits are present on the farm. The guard will also help protect the plant from spray drift when maintaining the hedge line.

Watering: This is not necessary unless periods of drought occur. During these periods water thoroughly. This however is often impractical in the country. The best policy is to plant early in the season and keep weed competition to a minimum. In dire situations where watering is impossible plants can sometimes be saved by further trimming to reduce transpiration.

Pictures and Ratios of Varieties Included

Crataegus Monogyna 1+1
(Hawthorn) - 60%

Acer Campestre 1+1
(Field Maple) - 5%

Viburnum Lantana 1+1
(Wayfaring tree) - 5%

Prunus Spinosa 1+1
(Blackthorn) - 10%

Euonymus Europaeus 1+1
(Spindle) - 5%

Cornus Sanguinea 1+1
(Dogwood) - 5%

Corylus Avellana 1+0
(Hazel) - 5%

Malus Sylvestris 1+1
(Crab apple) - 5%

Mycorrhizal Beneficial Fungi

- see p135 for more information

Extensive research has proved that the incorporation of mycorrhizal fungi at the time of planting greatly enhances survival rates and future performance of plants.

Please contact us for further information.

Size	Dosage
2.5 Litre Tub	Treats 360 plants
5 Litre Tub	Treats 720 plants
10 Litre Tub	Treats 1440 plants

As availability changes through the season the mix may be adjusted at our discretion.

Kingsdown Native Country Hedge Mix is sold per metre
(5 plants per metre) and is usually available in the following sizes:

Hedging (5 plants per metre)	Height	Age
	30/40cm	1+1/1+0
	40/60cm	1+1
	60/80cm	1+1
	80/100cm	1+1

Spiral Rabbit Guards & Canes (5 of each per metre)	Colour/Size
	Clear 60cm
	Clear 45cm
	Brown 60cm
	Brown 45cm

See page 123 for biodegradable spiral guard option.

BAREROOT HEDGING AND FOREST TREES

Please note that unless the plant is marked with * in the margin there is a minimum order quantity of 25 per variety.

Customer Comment

.....

“I took delivery of the corresponding order today and was extremely pleased with what you guys supplied. They were exactly what I was after and the customer was delighted. This was my first order from you and will be very happy to use you again...”

Anyway just wanted to pass on my thanks for a smooth process from making the order via Andy to all subsequent communication and delivery scheduling.”

SPECIMEN SHRUBS

(20 LTR)

For some time now we have been supplying a large range of 20L specimen shrubs to the trade. The plants are grown to an exacting standard of quality and are perfect for those projects where instant impact is so important.

The plants can be bought individually but there will be substantial savings to be had when 30 or more are ordered. Whilst this list is of course subject to the usual stock fluctuations, most shown here will be available all year round.

Specimen Shrubs - all 20 Ltr pots

PLEACHED TREES

The 'pleaching' of trees is a traditional practice of pruning a tree to form horizontal tiers of lateral growth.

Ancient pleached trees can be seen in many old formal gardens around Britain. This method of pruning and forming of trees provides additional wind protection and privacy to a garden in a way that nothing else can.

Pleached trees look in keeping with the most traditional English garden, but have found a new niche in more modern gardens where a lack of privacy is so often a problem. They will create a leafy screen which will effectively and inoffensively block off intrusive windows from neighbouring properties.

Pleached trees from Kingsdown (and opposite)

KEY FACTS

Available: Rootballed pleached trees are available from October to early/mid April. Potgrown options are available outside the rootball season.

Delivery considerations: Pleached trees (particularly rootballed) can be very heavy and may require machinery for offloading and planting. The landscaper or tradesperson should always be on site to receive delivery and help off-load as they are somewhat unwieldy to handle.

Min quantity: None

Related Products: Tree & Shrub Compost, Rootgrow mycorrhizal, bonemeal, Rootball anchoring system, Root Irrigation system, tree stakes, tree tying kits.

Tilia, Carpinus and Fagus are the trees most often chosen for pleaching, although many other types of tree can be used. Carpinus and Fagus will give a greater degree of privacy in the winter months, as tightly clipped mature trees will hold much of their leaf through the winter.

These trees come in two forms as shown in the diagram below. 'Pleached' trees are traditionally pruned into 4 horizontal tiers whereas 'Full Screen' trees are trained to give maximum screening effect by fanning all available growth across the framework. When ordering or enquiring please clearly state which form you are interested in.

The stem height is normally 180cm – but if a different length is required, do ask as there will certainly be other options available.

The frames on these trees are normally 150cm wide x 120cm tall. Some of the larger girth trees may have bigger frames but we will always clarify the sizes when quoting.

Pleached or full screen trees are supplied throughout summer and winter as pot-grown (or rootballed from October to April). There will be more sizes and varieties available during the rootball season.

Please contact us for more information and prices.

Traditionally Pleached

Full Screen

Full Screen option is strongly recommended if instant privacy is required.

FULL SCREEN TAXUS

FULL SCREEN TAXUS

BAREROOT & ROOTBALLED TREES

The winter season brings with it our full range of large 'standard' trees.

These are ever popular with Councils and Estates as well as Landscapers and Garden Designers. In addition to the trees listed here we can supply semi-mature trees of 50cm girth or more.

The following pages outline what we expect to be available during the autumn/winter planting season. However, other varieties and sizes will be available on request.

Rootballed trees at Kingsdown

KEY FACTS

Available: Barerooted and rootballed trees are usually available from October to early/mid April. A good selection of potgrown trees are available outside the rootball season.

Delivery considerations: Trees (particularly rootballed) can be very heavy and may require machinery for offloading and planting. The landscaper or tradesperson should always be on site to receive delivery and help off-load as they can be somewhat unwieldy to handle.

Min quantity: None

Related Products: Tree & Shrub Compost, Rootgrow mycorrhizal, bonemeal, Rootball anchoring system, Root Irrigation system, tree stakes, tree tying kits.

Tree Specification

Size	Form	Girth at 1m	Overall Height	Clear stem
175/200	Feathered tree	-	1.75/2m	Stem untrimmed
200/250	Feathered tree	-	2/2.5m	Stem untrimmed
6/8	Light Standard	6/8cm	2.5/3m	150/175cm
8/10	Standard	8/10cm	2.5/3m	175/200cm
10/12	Selected Standard	10/12cm	3/3.5m	200cm
12/14	Heavy Standard	12/14cm	3.5/4m	200cm
14/16	Extra Heavy Standard	14/16cm	4.25/4.5m	200cm

Please note: Standard trees are sold on girth size. The overall height given is only an approximation.

In the grounds of Fredville Park, Nonington, Kent stands this monumental tree. At over 20 metres tall it is the largest surviving maiden oak in the United Kingdom and with a gigantic girth of 12 metres, outclasses even the Sherwood Forest Major.

‘Majesty’ is also extremely old and has seen over 30 English monarchs come and go, being already about three hundred years old when Queen Elizabeth I was born.

MULTISTEM TREES

Multistems are very individual, sometimes curious looking trees and can have great impact on their own or planted as clusters or groups. They have proved increasingly popular over the last few years and we've seen them used in a great variety of situations from the entrance to grand hotels to the creation of enchanting coppices.

In particular *Osmanthus* is much sought after and these are available as 'Parachute/umbrella' shaped multistems with tightly clipped domes. See page 93.

* Please note some of our multistems are grown in peat, so if your requirement is for a National Trust project, please check with us before ordering.

Multistem trees at Kingsdown

KEY FACTS

Available: Rootballed multistem trees are usually available from October to early/mid April. A good selection of potgrown trees are available outside the rootball season.

Delivery considerations: Multistem trees (particularly rootballed) can be very heavy and may require machinery for offloading and planting.

Min quantity: None

Related Products: Tree & Shrub Compost, Rootgrow mycorrhizal, bonemeal, Rootball anchoring system, Root Irrigation system, tree stakes, tree tying kits.

A close-up photograph of a woven basket filled with fresh fruit, including red apples, green pears, and clusters of dark grapes. The basket is set against a soft, sunlit background of tall grass, creating a warm and inviting atmosphere. The word "Fruit" is written in a large, elegant, white cursive font across the lower portion of the image.

Fruit

FRUIT TREES

The supply of fruit trees has blossomed for us over the last decade or so and today we find ourselves delivering them all over the UK from the far reaches of Scotland to the far end of Cornwall.

Trees

Old Apple Trees

These Apple Trees are like good old friends, stable, reliable but a bit quirky with bags of character and a fruity sense of humour! They'll add a certain aura of bygone days to a garden and will bring with them their own evidence of years of skilled husbandry.

Note: It is worth bearing in mind that our Old Fruit trees are primarily used to create an 'old orchard' effect rather than functional picking orchards with a large range of varieties.

Approximate Dimensions:

Trunk 60/70cm tall Total Height 220/250cm Span 200cm

Trees – subject to availability: Apple Elstar 20/30cm girth, Apple Rode Boskoop 25-35cm girth, Apple Rode Boskoop 40-45cm girth.

Old Cherry Trees

The wild cherry (*Prunus avium*) has an indigenous range extending through most of Europe, western Asia and areas of north Africa. Almost certainly the fruit of this tree was consumed and therefore the culinary use of Cherries must reach far back into the mists of antiquity. The Roman conqueror, Lucius Licinius Lucullus is recorded to have brought cultivated cherries back to Rome from Turkey in 72 BC and trees were later introduced to England by the order of Henry VIII who tasted (and obviously enjoyed) them in Flanders. As the images show, our Old Cherries are substantial trees and will make a pretty and useful addition to your design.

Approximate Dimensions:

Trunk 70/90cm tall Total Height 225cm +

Trees – subject to availability: Cherry Bigarreau Burlat, Napoleon, Moreau, Coeur de Pigeon, to name a few. Girth sizes range from 18cm to 30cm or more.

Old Fig Trees

From the bleak and wild mountains of Israel to cosy English courtyards, Figs are found thriving in all sorts of environments and producing heavy crops of delicious fruit. Although the bark of Figs is smooth and they lack the aged appearance of most of our living antiques they are nevertheless available as impressively large trees with substantial trunks and spreading heads.

Approximate Dimensions:

Trunk 70/90cm tall

Total Height 225cm +

Trees available: *Ficus carica* 'Brown Turkey' - girth sizes range from 30cm to 70cm.

Old Grape Vines

Perfect for pergolas, patios or for training along a sunny old wall these quirky, gnarled vines will immediately look the part and provide juicy crops of fruit into the bargain.

Trees available: Vitis vinifera Italia (others may be available on request).

Girth sizes from 20cm to 50cm available.

Old Mulberry Trees

Mulberry trees are quite at home in Britain, in fact they've lived here since Roman times and have enjoyed royal associations since the early 17th century, when James I set about establishing a silk industry to rival that of France, Italy and Spain. Silk worms feed primarily on White Mulberry leaves but James didn't know that and his great plans went sadly awry when he ordered and planted 10,000 Black Mulberries by mistake. It is actually possible that some of the 'Royal trees' may still exist, as Mulberries are extremely long lived.

There's nothing quite like a Black Mulberry. When properly ripe they are unusually juicy and the sudden burst of intense flavour almost takes you by surprise. White Mulberry trees are nowhere near as prolific fruit bearers as Black Mulberries but the very old specimens shown in the pictures below do make for an interesting feature in the garden.

Approximate Dimensions: Varies according to girth.

Trees – subject to availability: *Morus alba* 100/120cm girth, *Morus nigra* from 20 to 50cm girth.

Old Pear Trees

The fissured and rough bark of our old Pear Trees make them one of the most characterful options we're listing here. Most will be approaching 50 years old and with their knobbly branches and thickset trunks they look like the venerable worthies that they are.

Approximate Dimensions:

Trunk 60/70cm tall

Total Height 220/250cm

Span 200cm

Trees – subject to availability: Pear Conference 50/60cm girth, Pear Doyenne du Comice 40/50cm girth, Pear Doyenne du Comice 70cm+ girth.

Old Plum Trees

Plum trees are generally easy to look after and make a welcome addition to any orchard. Plum Opal is self-fertile and whilst the trees will do best in a sunny spot they are well able to tolerate harsh winter weather.

Approximate Dimensions:

Trunk 60/70cm tall

Total Height 220/250cm

Span 200cm

Trees available: Plum Opal 40cm+ girth.

Old Pomegranate Trees

Our Old Pomegranates are a charming addition to our Old Fruit Trees and bring with them a touch of Mediterranean ambience. Despite their association with warmer climes, Pomegranates are surprisingly hardy and do well in most parts of the UK, though they will prefer a sheltered spot. Exotic flowers are produced over a long period in the summer. The trees are self-fertile, but a warm autumn is required for a crop of ripe fruit.

Approximate Dimensions:

Trunk height and total height tend to vary according to girth size.

We can advise on this at quotation stage.

Trees available: *Punica granatum*- girth sizes range from 30cm to 70cm or more.

Old Espaliers

Planted up against a wall these superb espaliers give the impression that they were placed there in generations past. The years of skilled pruning clearly shows and their presence will add something to a property in a way that nothing else can.

Customer comment: 'Kingsdown were so easy to deal with – quick to respond, attentive and their prices really competitive... the Espaliered Pears arrived in perfect condition despite their stately years and instantly looked at home leaning against the old barn, as though it had always been so.'

Approximate Dimensions:

Height – up to 250cm *Width* – up to 250cm

Trees – subject to availability: Pear Conference 50/60cm girth, Pear Doyenne du Comice 70/80cm girth, Pear Doyenne du Comice 80cm + girth.

Old Espaliers

Old Espaliers

Mature Fruit Trees

Our mature rootballed fruit trees are available in a good selection of varieties and are ideal for making functional instant orchards that will last for generations to come. The trees, both full standard and half standard are 6 to 8 years old and are already fruiting well.

Supply is from early/mid November through to the end of March.

ESPALIER FRUIT TREES

A 'middle of the road' choice for espalier fruit trees.

These rootballed espaliers are a very practical option, easy to handle, with a large selection of varieties and very consistent quality. Admittedly they are not huge and gnarled like the ones in the earlier section but they certainly look mature with their chunky trunks and total height of 210cm.

Over the last few years designers and landscapers have shown keen interest in these trees and we've supplied many to older properties with traditional walled gardens. Please get in touch with your requirements and we'll be glad to provide you with more information.

Espalier Fruit Trees at Kingsdown

KEY FACTS

Available: These rootballed espalier fruit trees are usually available from mid-November to early/mid April.

Delivery considerations: Although not particularly heavy they are a bit awkward to handle so we would advise that two people are required for moving around site and planting (a wheelbarrow or sack-truck may be helpful).

Min quantity: None

Related Products: Tree & Shrub Compost, Rootgrow mycorrhizal, bonemeal, Root Irrigation system, tree stakes, tree tying kits.

ESPALIER FRUIT TREES

This range of espalier fruit trees is available from mid-November until early April. There is a good selection of varieties (subject to availability at time of ordering) and they are all grown to exactly the same size. 150cm wide x 210cm tall.

BAREROOT FRUIT TREES

Always welcome in the garden, a wide range of fruit trees are available from Kingsdown, grown in a variety of traditional ways.

A selection of more mature fruit trees is also available as half standards and full standards. These can be supplied up to 25/30cm girth or more. See page 106-107.

Pollination: In urban gardens pollination of fruit trees is not usually a problem due to the proximity of so many other varieties. However, the varieties that we are showing here have been chosen so that they are all in the same pollination groups to avoid concerns as to whether pollination will be a problem.

Apples

Mostly grown on MM106 Rootstock.

All varieties shown here are of the same Pollination group.

Customer Comment

'I would like to make another order for the Palace and also tell you just how amazing the Tulip Red Shine were in April. They were a huge draw for our visitors and made a new contemporary garden a real highlight...'

BULBS

For nearly twenty years Kingsdown have been supplying a large range of bulbs to the trade. The selection is comprehensive with bulbs suitable for virtually any project requirements ranging from woodland planting to contemporary city centre schemes.

The bulbs can usually be ordered from mid-July with our ordering cut-off date being 30th September. Delivery of bulb orders takes place during late September to mid-October.

Look out for our new bulbs brochure in July.

Tree Shelters & Shelter Stakes

Defender-Pro Shrub Shelters

The square construction of the Defender-Pro allows it to be delivered to the point of application flat packed therefore making transport of large quantities easier and more cost effective. The staking method is simple and fast and also allows the shelter to be lifted to assist with maintenance.

Manufactured from environmentally responsible and 100% UV Stabilised polypropylene the Defender-Pro has a built-in radial top lip to minimise abrasion to the tree stem and a line of least resistance to ensure the shelter splits open as the shrub-tree increases in size.

Size: 600mmx150mm

SilviTube Tree Shelters

A completely round, tubular shelter is the most desirable shape, giving the least wind resistance and the smoothest interior.

The Silvitube is a twin walled shelter, extruded in round tubular shape and pressed flat.

With a controlled quantity of UV stabiliser added, it will protect the tree during the early years but will photo degrade in time.

Other benefits:

Built in grooves running the length of the shelter to allow water to drain should the tree fill the tube.

- Grooves allow the shelter to split open to allow for fast growth.
- Supplied with two fitted releasable ties for fast fitting.
- Folds flat for easy storage and transport.
- When released from the pack, it retains the memory of its original shape and returns to its tubular shape.

Description:

Colour: green

Diameter: 90mm with a flared top.

Lengths: 60cm 120cm 150cm

Supplied in bundles of 25

Shelter Stakes

These shelter stakes are sawn square, pointed and pressure treated.

These come as 25mm which is suitable for a lot of applications and 32mm for loose or stony ground and tough weather conditions.

0.9m	0.9m	1.2m	1.35m	1.5m
x25mm	x32mm	x32mm	x32mm	x32mm

Cable Ties

Cable ties can be used as an alternative to staples for fixing mesh guards to stakes.

(Pack 100) 200mm

Spirals & Canes

Spiral Rabbit Guards are vital to the success of rural tree or hedge planting. We have been supplying Standard Spirals for about 20 years and we will continue to supply these for as long as there is a demand. Standard Spirals are made from 100% recycled plastic. We also offer a Biodegradable Spiral option which functions exactly like the Standard Spiral but has no or extremely little negative environmental impact. The use of a 90cm cane is advised for both types.

Standard Spiral Guards

Standards Spirals are available in brown or clear and are provided with holes to allow light and air to reach the tender young shoots. They are available in three lengths and are made from PVC, which retains its shape, even in hot weather.

Size

45cm (brown or clear)

60cm (brown or clear)

75cm (clear)

Biodegradable Spiral Guards

Biodegradable Spirals look and work just the same as the Standard version except that they are an attractive semi-translucent green, designed to blend in with the surroundings. After the Biodegradable Spiral has come to the end of its useful life it will decompose and harmlessly disappear. If you (like us) are committed to doing all you can to protect the countryside please consider using this product.

Weld & Plastic Mesh Guards

Mesh Guard Rolls

Made from high density polyethylene, UV stabilised and chemical resistant they provide long term protection from pests such as rabbits and deer. The smooth top minimises bark abrasion.

Colour: Brown

Mesh Aperture: 13x13mm

60cm (50m roll)

120cm (50m roll)

Weldmesh Guards

Used for protecting standard trees from animals and vandal damage, these guards are made from 12 gauge 75mm by 25mm mesh steel galvanised to BS443.

Made in one piece, they are normally stapled to a sturdy tree stake for support.

1.8m x 200mm dia.

1.8m x 300mm dia.

Rabbit Netting

We supply a premium rabbit netting that is manufactured to BS EN 10223 and heavily galvanised to BS EN 10244 providing maximum long life performance. This standard ensures it's eligible for use in grant aided schemes.

Rabbit Netting

1050x30x1.0mm Hex Nett x 50m

Strimmer Guards

Strimmer guards are needed on any trees planted in grass areas to protect the bark from damage by strimmers and other machinery.

225mm x 125mm

Weed Mats

Black UVI Polythene Weed Mat

Black polythene is very economical, reduces water loss through evaporation, and prevents weed growth by excluding light.

60cm x 60cm square
1m x 1m square
1m x 200m roll
1m x cut length (per m)

Black UVI Woven Polypropylene Weed Mat

Woven black polypropylene is the most popular mat, providing the same beneficial features as polythene; but it is tougher and allows water to penetrate.

50cm x 50cm square
1m x 1m square

Fabrics

Landscape Fabric

Our landscape fabric is a permeable membrane to control weed growth.

We consider this to be the best fabric on the market, for this purpose. Dark colour, soft and flexible to follow soil contours and hollows, this fabric also has a rough surface texture to hold mulch.

* Please be aware that this product is not UV stable and will disintegrate if exposed to sunlight (if used correctly and covered in bark mulch etc disintegration will not occur for many years).

We supply our fabrics in 100m rolls or cut to your desired length.

2m x 100m roll
2m x cut length (per m)

Wool/Jute Matting

The biodegradable wool/jute matting is a very high quality product. Wool fibres are punch bonded onto a thin polythene backing, producing a mat which insulates the soil and allows water penetration, but reduces evaporation and eliminates weed competition. Being mid-brown in colour, the mat is unobtrusive to the eye and will degrade in 2-3 years.

1m x 30m roll
2m x 30m roll

Woven Polypropylene Membrane

Woven polypropylene membrane is the best material for use under drives and patios etc. It provides a strong supportive base layer, increasing the load capacity.

We supply our fabrics in 100m rolls or cut to your desired length. For ease of transport the membrane of the 4.15 x 100m rolls have been folded giving a total roll width of 2.07m.

1m x 100m rolls	2.07m x 100m rolls	4.15m x 100m rolls
1m x cut length (per m)	2.07m x cut length (per m)	4.15m x cut length (per m)

Weed Mat Pegs

Plastic Weed Mat Pegs
150mm

Copper Coated Weed Mat Staples
150mm X 100mm

Windbreaks

Windbreaks

To protect from driving rain, drifting snow and destructive winds.

Our windbreaks are manufactured from high-density polyethylene giving you a maintenance free protection, with a life expectancy of up to 20 years against UV degradation.

1m x 50m 360gm
1.5m x 30m 450gm

Urban Tree Planting

Root Barrier

ReRoot 2000/RootStop is a high strength root barrier for deeper applications. This product has been used extensively on many projects, particularly in new service infrastructure projects, business parks and housing developments.

ReRoot 2000/RootStop is rigid enough to hold its form when placed into a trench. This is a big advantage as it will not be dragged downward during backfilling. Market leading puncture resistance and strength, mean that this is the root barrier of choice for specifiers and utility companies requiring root free service corridors. The high puncture resistance of ReRoot 2000/RootStop allows easier compaction close to the barrier ensuring an excellent product/soil interface.

600mm tall (per m)

1000mm tall (per m)

Root Irrigation Kit

The most important requirement in the first years of newly planted trees is sufficient water to the root systems. In surface watering, the bulk of the water runs off or evaporates, resulting in roots forming near the surface, the tree is then unable to withstand periods of drought. The Root Irrigation Kit has been developed to supply water quickly to the base of the root system to encourage deep root growth.

Benefits: Quick and easy to install • Improved drought tolerance • Fast watering
• Reduces water volume by eliminating wastage.

Tree Protectors

The classic range is a high specification black polymer coated, offering long life protection. They have a unique drive in feet locking system securing the protector into the ground. Supplied in two halves, the protector is simply bolted together using the supplied corrosion resistant fixing bolts. Available in 40cm and 60cm diameters with matching grills.

Black polymer coated for long life protection • Frost proof, will not crack • Easy to install
Corrosion resistant fixing bolts supplied as standard • Locking feet included

1.8m x 400mm

1.8m x 600mm

Tree Grilles

Where Tree Protectors are placed in paved or hard surface areas the pleasing appearance of the grilles enhances the beauty of a street planted tree and allowing water to reach the root system without the danger of compaction to the surrounding soil.

The grilles are supplied in four pieces and are manufactured in a specially formulated SG Iron making them effectively shatterproof, unlike most other cast iron products on the market. They are available in three different sizes they are supplied as standard with a black painted finish.

80 x 80cm
100cm x 100cm
120cm x 120cm

Tree Grille Frame

The grille frames are manufactured in mild steel and are black polymer coated as standard. Supplied in two pieces, they come fitted with unique 150mm legs enabling the frame and grille to be securely fastened into the ground. These features combined with the drive in foot anchor system found on the classic & Sheep Proof protector range, makes for a comprehensively secure system.

80 x 80cm
100cm x 100cm
120cm x 120cm

How to tie a tree (double-stake and crossrail)

Tree Stakes & Rail

Half Round Rail

Machined and pressure treated, half round rail is used as a cross rail between two stakes for stabilizing newly planted trees.

3.6m x 85mm

0.9m x 85mm

Tree Stakes

We offer machine-turned stakes which give a uniform diameter and a very neat appearance. All stakes are pointed and pressure treated.

1.2m x 50mm 1.65m x 50mm

1.65 x 60mm 1.8m x 75mm

2.4m x 75mm

Post Driver

Large post rammer with steel handles and reinforced top. Used to drive in fence post up to 150cm/6in diameter.

Tree Ties

Buckle Ties

Buckle ties are probably the most commonly used tree tie, they are very easy to fix and easy to adjust. Prices include hoop collars.

Sapling 30cm x 10mm	38cm x25mm	45cm x25mm	60cm x25mm	60cm Heavy Duty x38mm
----------------------------	-----------------------	-----------------------	-----------------------	----------------------------------

Tree Cushions

Tree Cushions, made from strong thermoplastic rubber, have a hollow centre which allows them to adjust to the shape of the tree as it grows. Available in 25mm or 38mm widths, these cushions are suitable for use with buckle ties and tree strapping.

25mm

38mm

Tree Pads

Moulded rubber pads designed to fit snugly between the tree and stake to allow the trees to be pulled firmly to the stake without chafing.

25mm
38mm
50mm

Hoop Collar Spacers

Hoop Collars are available in two sizes for use with buckle ties and tree strapping.

25mm
38mm

Spacer Sleeves

Plastic sleeves are used in conjunction with strapping to act as a buffer between tree stakes when more than one stake is used to support the tree.

30cm x 25mm
30cm x 38mm

Standard Tree Strap

Tree Strapping is available in 25m coils for strong, economical tying of trees. Spacers are available separately.

25mm x 25m roll
38mm x 25m roll

Chainlock

Supplied in 25m coils, this product offers an easily adjustable strap of infinitely variable length. We stock chainlock No. 2, 4 & 5 which are all made from PVC to give a strong strap.

11.4mm w x 2.5mm (thick)
x 25m (No.2)

25.4mm w x 2.5mm (thick)
x 25m (No.4)

25.4mm w x 3.8mm (thick)
x 25m (No.5)

Flexi-tie

A supple brown plastic tubing for tying roses, climbers.

3.5mm dia - 500g - 70mtrs

2.5mm dia - 500g - 120mtrs

Rootball Anchoring Systems

Our Tree Anchor system is a cost effective way for securing trees up to 12m high. The cast aluminium anchor attached to a galvanised cable is driven into the ground using a drive rod and then tension is applied to the cable to lock the anchor in place. The rootball can then be held firmly in place using the tensioner supplied. This is generally the first choice because of the ease of installation and once in place there are no stakes or unsightly cables.

Lawn Fertiliser

Autumn/Winter Turf Feed 25KG

3:10:5 (mini-granular formulation)
Compound Fertiliser 3 - 10 - 5
Apply from September onwards
but not during frosts.
Application Rate: 70g/m²

Lawnsand 25KG

For the control of moss.
(Can be used on all grasses)

Powder formulation
Nitrogenous Fertiliser with Iron
Contains 5.5% w/w Ferrous Sulphate (as FeSO₄)
Application Rate: 135g/m² (4oz/yd²)

Spring & Summer Minigranules 25KG

11 : 5 : 5 (mini-granular formulation)
Compound Fertiliser 11 - 5 - 5
Apply in mid-season on areas subject
to intense use.
Application Rate: 70g/m²

Feed, Weed & Moss Killer 20KG

For the control of many common broad-
leaved weeds and moss in amenity turf
areas such as parks, sports grounds and golf
fairways. Do not use in areas of fine turf such
as golf or bowling greens.

Susceptible weeds: Creeping Buttercup and Plantains

Moderately susceptible weeds: Common Chickweed, Dock, Dwarf Thistle, Sorrel
and Cats Ear.

(powder formulation): Compound Fertiliser with Fe 9 - 2 - 2 + 4.0Fe
Contains: 0.3% MCPA, 0.2% w/w Dichlorprop-p and 10.9% w/w Ferrous Sulphate

Application Rate: 70g/m² (2oz/yd²). Only apply to established turf between spring
and early autumn.

Planting Fertiliser

Bonemeal 10KG (Tub) 25KG (Sack)

Bone Meal is a most valuable organic
fertiliser providing a long lasting slow
release of phosphates and nitrogen.
It can be used before planting by
mixing with soil in the planting hole,
or for established bushes etc. it can be
applied as a top dressing to the soil
each spring.

Fish Blood & Bone 10KG (Tub) 25KG (Sack)

Fish, Blood & Bone is an organic based multi-
purpose plant food which will feed all the
plants in the garden.

Fish, Blood & Bone give long-lasting results
so a single application lasts up to six weeks to
keep plants in best condition and encourage
flowering.

Growmore 10KG (Tub) 25KG (Sack)

Growmore is a multi-purpose plant food with an even balance of nutrients
to feed all the plants in the garden. It can be used when preparing new beds
and to provide essential nutrients throughout the growing season. It can also
be used in preparation of new lawns.

Mycorrhizal Fungi

Rootgrow

Size

360g sachet
1kg sachet
2.5 ltr tub
5 ltr tub
10 ltr tub

Rootgrow is licensed by the RHS and endorsed by RHS gardeners

Both trees planted at the same time - **four years later**

Untreated

Treated

Over 90% of all plants depend on a naturally occurring beneficial group of fungi called mycorrhizal fungi to transport nutrients and water to their roots. In normal conditions it may take up to 5 years for these fungi to naturally colonize freshly established plants. However, when Rootgrow Professional is applied at the time of planting this effect will be achieved in 2-4 weeks.

How do plants benefit?

- 1) One treatment lasts a lifetime. (As the plant grows, the fungal partner multiplies)
- 2) Better drought tolerance. (Due to the vast fungal root making best use of all available moisture)
- 3) Earlier and better growth. (In 2-4 weeks after planting the mycorrhizal fungi can increase the active root area of plants by up to 700 times)
- 4) Better uptake of fertilizers when applied after planting. (The network of mycorrhizal fungi act like a net, catching nutrients and reducing leaching)
- 5) Increased uptake of obscure trace elements from the soil leading to increased plant health. (The ultrafine fungal mycelium can unlock nutrients from the soil)
- 6) Reduced mortality especially bare rooted, rootballed and specimen plants.
- 7) Helps to control soil pathogens. It has been found that in some cases the friendly fungi grow faster and naturally colonise weak points in the roots that pathogens could otherwise infect.

Rootgrow is easy to apply

Either sprinkle dry granules into the planting pit for container grown or rootballed plants, or make a root dip for bare root plants with the gel provided.

How much will I need?

As a guide, use 5gm of rootgrow per litre pot size (Eg. 10gm for a 2lt plant) For bare root plants a 1kg pack will treat 250/300no. 60/80cm plants, or 20no. 8/10 standard trees. Full details are on the packs.

Topbuxus Healthmix is a foliar feed specifically produced in response to the dramatic escalation of Box Blight over the last few years. Topbuxus Health Mix encourages rapid growth in Box plants and at the same time significantly increasing their natural resistance to Blight.

Tobuxus Health Mix is a great product – it totally revived 6 defoliated balls last year!

Jonnie Wake, Landmark Gardens Ltd

Hi, Your product is superb and working wonders with all my Box plants. Had full recovery on one suffering with blight. I am Head Gardener on a large estate and have a large collection of Box and topiary. Thanks again for this wonderful product. I can't endorse it enough.

Head Gardener at a large estate in West Sussex.

10 Tablet Bucket

100 Tablet Bucket

Bark, Compost & Soil

Bark Mulch Ornamental

**Loose collected
(approx 1m3)**

70LT Bag

A composted spruce bark mulch producing a high quality finish to any project.

Screened twice to 5 - 35mm with less than 5% fine material and less than 15% whitewood.

Bark Mulch Composted 50LT

This Composted Fine Bark is a rich organic bark based soil conditioner and can be successfully used to help retain moisture in light sandy soils and to help break up/lighten heavy clay soils.

Its free flowing habit makes it easy to incorporate into the soil. It has a normal partial range of 1-20mm, a typical bulk density of 400grms per litre and a pH of 4.5 - 5.5.

This product is 100% peat-free.

Both of the above also delivered loose by truck (minimum load 10m2).

Compost

Tree & Shrub Planting Compost 60L

An open textured, non-peat based product with generous phosphate levels making this compost ideal for rapid root establishment of newly planted trees, shrubs and perennials.

Multi-Purpose Compost 60L

Bulrush multi-purpose compost is an enhanced formulation with essential nutrients and trace elements delivering superior plant growth, healthier plants and improved water holding capacity.

Ericaceous Compost 50L

A peat based low pH compost with added nutrients and trace elements.

Suitable for lime intolerant plants and helping to neutralising calcareous soils.

John Innes Ericaceous 25LT

A soil based, low pH compost with added nutrients and grit. For potting lime intolerant plants into tubs and planters.

John Innes No. 3 20LT

A soil based compost with added nutrients and grit. For potting and repotting mature plants.

Blended Farmyard Manure 50L

J. Arthur Bowers Organic Farm Yard Manure is a 100% Organic soil conditioner.

It can be used to improve drainage and aeration in clay soils and add body to light sandy soils. It provides a natural source of organic matter to encourage healthy root growth.

It also improves soil fertility by adding vital humus and plant foods into the soil.

Soil

John Innes Topsoil 25L

J. Arthur Bower's Top Soil is made from natural English loam blended with organic matter and nutrients.

For creating new gardens and lawns.

For building raised areas and rockeries.

Topsoil / Dumpy Bag (collected)

Quality screened topsoil.

Also delivered loose by truck
(minimum load 10m²).

Terracotta Pots - *heavy rim*

Diameter: 60cm	Height: 58cm
Diameter: 70cm	Height: 64cm

A mouse eye view of Kingsdown turf with one roll pulled back showing how well established the root-bed is. This means that the turfs are very strong making them easy to handle and quick to establish. We never use plastic mesh.

TURF

Kingsdown turf is of a consistent good quality producing a low maintenance, hard wearing lawn with good all round colour and cleanness of cut.

The turf comes in wide one square metre rolls (measuring 167cm x 60cm) with a seed mixture consisting of 20% Perennial Ryegrass, 10% Smooth Stalk Meadow Grass, 40% Slender Creeping Red Fescue, 20% Strong Creeping Red Fescue and 10% Chewing Fescue.

Orders placed before 2.00pm can be delivered or collected two days later- e.g. an order placed before 2.00pm on a Tuesday can be delivered or collected Thursday morning. (No deliveries or collections available on Mondays). There is a minimum order quantity of 50 rolls.

Questions our sales team will ask when you request a quote or order for delivered turf:

Is there a forklift on site?

If not, the lorry will come with a tail lift and pallet truck. The turf will be dropped off on the nearest hard surface. (Pallet trucks don't work on gravel.)

Is there room for an 18 ton lorry?

An 18 ton lorry is approximately the same size as a coach.

Delivery address?

Just a postcode is fine for the purposes of quoting but a full address is required when ordering.

Lawn Seed

Kingsdown Nurseries supply lawn seed for all situations, from top quality lawns and bowling greens to grass verges and land reclamation sites. The following list, all mixtures of which we hold in stock, will fulfil the requirements of most landscape situations.

PRO 50 High Quality Hard Wearing Lawn

- 5% *Fagbian 4 Turf Tetraploid Perennial ryegrass*
- 10% *Tetragame 4 Turf Tetraploid Perennial ryegrass*
- 15% *Chardin perennial ryegrass*
- 20% *Claudine perennial ryegrass*
- 30% *Sergei strong creeping red fescue*
- 10% *Belleaire chewings fescue*
- 10% *Samanta slender creeping red fescue*

A very successful mixture where a high quality and durable lawn is called for. Pro 50 is fine in appearance and hard wearing, with excellent colour. The cultivars used ensure a low maintenance turf with good disease resistance, keeping future maintenance costs to the minimum.

Sowing rate: 35 - 50g/m²

Overseeding: 15 - 25g/m²

Mowing height: Down to 10mm

20kg bags and 10kg bags

PRO 51 Hard Wearing Lawns

- 30% *Double 4 Turf Tetraploid perennial ryegrass*
- 30% *Esquire perennial ryegrass*
- 30% *Maxima strong creeping red fescue*
- 10% *Evora smooth stalked meadow grass*

A hard wearing mixture that will establish rapidly. Ideal for general purpose landscaping & lawns. Contains only turf type perennial ryegrass.

Sowing rate: 35 - 50g/m²

Overseeding: 25 - 50g/m²

Mowing height: Down to 13mm

20kg bags and 10kg bags

PRO 52 Fine Lawns (without Ryegrass)

- 15% *Wagner chewings fescue*
- 15% *Samanta slender creeping red fescue*
- 70% *Maxima strong creeping red fescue*

An economical, fine textured mixture, which will not be too demanding with regard to maintenance, suitable for landscaping and lawns.

Sowing rate: 35 - 50g/m²

Overseeding: 25 - 50g/m²

Mowing height: Down to 13mm

20kg bags

PRO 60 Shaded Conditions

- 5% ***Sabrena 1 rough stalked meadow grass***
- 30% ***Belleaire chewings fescue***
- 30% ***Samanta slender creeping red fescue***
- 35% ***Sergei strong creeping red fescue***

A top quality mixture designed to produce an excellent turf under shaded conditions, including golf tees. Solo rough stalked meadow grass germinates quickly, providing lush green growth year round. To ensure a successful turf, do not mow too closely and feed regularly.

Sowing rate: 35 - 50g/m²

Overseeding: 25 - 50g/m²

Mowing height: Down to 25mm

20kg bags and 10kg bags

PRO 85 Department of Transport

- 25% ***Esquire perennial ryegrass***
- 20% ***Maxima strong creeping red fescue***
- 30% ***Triana hard fescue***
- 10% ***Evora smooth stalked meadow grass***
- 10% ***Highland browntop bent***
- 5% ***Rivendel white clover***

The above mixture is ideally suited for road verges where the soil may not be of the best quality and where quick establishment, short growth, good stability (on slopes) and some salt and exhaust fume tolerance are called for.

Sowing rate: 10-20g/m²

Overseeding: 10g/m²

Mowing height: As necessary or twice/year to 75 - 100mm

20kg bags

PRO 120 Slowgrow

- 60% ***Claudine perennial ryegrass***
- 15% ***Archibal slender creeping red fescue***
- 20% ***Samanta slender creeping red fescue***
- 5% ***Highland browntop bent***

The cultivar Stravinsky is the key to the new mixture. Stravinsky has an excellent rating for slow regrowth, significantly reducing mowing costs. The new mixture is ideal for use in a variety of landscape situations, including, housing estates, road verges, parkland and play areas, establishing rapidly to provide a dark, dense and attractive reduced maintenance lawn.

Sowing rate: 35 - 50/m²

Overseeding: 25g/m²

Mowing height: 12 - 50mm as necessary

20kg bags

Wildflower Seed

We offer a selection of wild flower mixtures for different habitats and soil types. It is important that the correct mixture is chosen and a suitable maintenance regime adopted for successful establishment.

Apart from cornfield annuals, wild flowers establish better on poor soils where there is little competition from vigorous grasses and weeds. The addition of fertilizer is not desirable.

Sowing

Wild flower seed can be sown during most of the year, although March/April and August/September are most suitable. Prepare a weed free tilth, broadcast or drill the seed at 5gm per m² and lightly harrow or rake into the surface. A Cambridge roller can be used to firm up the seed bed.

Maintenance

First year

Cut the sward to 5cm every two months or when the sward reaches 15cm, removing all cut material. Spot treat or dig out persistent, pernicious weeds. Cornfield annuals should not be cut until September.

Subsequent years

Cut to 5-6 cm during March/April and remove the cuttings. Cut again after the flowering season is over – normally September/October. For cornfield annuals, harrow the surface in autumn or spring to help regenerate the plants.

Lawn Edging

Designed by professional landscape architects, the multi-award winning Rite-Edge is now increasingly specified in professional landscape designs as the perfect edge for lawns, borders, beds and pathways, keeping that pristine neat garden appearance with perfect corners and enviable sweeping curves.

Held securely in place with barbed fixing stakes, Rite-Edge is manufactured from an Aircraft Grade Aluminium Alloy designed to last 25-30 years, so there is no painting, staining, rusting or replacing to worry about.

Rite-Edge, being light and easy to handle, comes in long lengths and has a unique, telescopic design to make installation very neat, quick and easy. The profile of Rite-Edge features a smooth round top edge, and a castellated body which gives maximum strength for heavy lawn mowers and prevents lifting by frost.

Stand back with pride and admire that permanent "Just Edged" look without all those hours of back-breaking edging spade and shear work.

Benefits

- **Permanent - no maintenance required**
- **Easy to install**
- **Saves hours of future edging work**
- **Keeps the garden at its best**
- **Many Border Options - Sand, Gravel, Bark, Lawn, Pebbles, Slate**

Installation

Each length is 2.4 Mtrs long and we recommend 5cm (2") of overlap for each joint which should be considered in your length required calculation.

- 1 Dig a small trench around 5cm wide and 10cm deep in the exact position you require your new edge.
- 2 Now form the Rite-Edge to the shape and design you require, including the 5cm overlap joints. This can now be placed into the trench you formed for the edge.
- 3 Check the exact height for the top of the Rite-Edge which should be just above true ground level but beneath the required cut grass level.
- 4 If you are now happy with the shape and height, add the fixing stakes and drive fully home.
- 5 A simple back filling on the sides of your Rite-Edge completes your Rite-Edge installation.

Available in Silver, Brown and Green (14 lengths per box)

- Strong but flexible
- 2.4m long
- ends telescope together
- No rust aluminium
in three colours

Portable hose reel made from epoxy coated steel tube, complete with steel bracket for wall mounting and standard 1/2" hose coupling.

Portable hose reel 100M-1/2" (70M-3/4")

Hose trolley made from epoxy coated steel tube, complete with standard 1/2" hose coupling.

Sprinkler & Drip Irrigation

Fitting an irrigation system is simpler than is generally thought. First, check the flow rate of the tap you are using by doing this simple test. Run your tap into a bucket for one minute and then check how many litres you have in the bucket. Multiply this figure by 60. This will give you a flow rate in litres per hour. Check the output figures for the sprinklers you are choosing. Then divide the flow rate of your tap by the output of the sprinkler. This will tell you how many sprinklers you can run at one time. If you need to run more sprinklers than this, then use a Brass Splitter Valve (see page 152) and have two timers running at different times. All you are likely to need is a hole punch but any other necessary tools would be in a normal tool box. Most fittings simply push together.

Please call for advice if you are unsure of your requirements.

EXAMPLE

Flow rate at tap = 1800 litres per hour

You choose Micro sprinklers SMV-2.5

(Output 1 litre per minute, 60 litres per hour).

$1800 \div 60 = 30$

So you could run 30 sprinklers on this tap.

Drip & Irrigation Fittings

45 Dripper Stake

This angled dripper stake is for use with the 6mm LDPE drip irrigation pipe.

Adjustable dripper 1-40L/H

Unscrew cap, one click at a time, to increase flow. Screwing the cap down completely will stop the flow. Adjustable from 1-40 l/hr.

Barbed adaptors 6mm

Use 6mm adaptor to connect lead-out tube to LDPE pipe.

Barbed Tee 5mm

Barbed Repair Plug 5mm

For use with 6mm LDPE pipe for repairing and capping off end of runs.

Hole punch 4mm

Nipple 5mm

PC Junior dripper 2L/H

A pressure regulated dripper with a flow of 2l/hr.

PC Junior Dripper Set 2L/H

A pressure regulated dripper set, with a flow of 2l/hr.

Pressure regulator 3/4"

Inline type – Outlet pressure 1.7bar. 3/4 " female inlet x 3/4 Male outlet.

Micro Sprinkler Nozzels

90deg. / 3D - 42L/H

Porous Pipe

16mm/30m roll
16mm/50m roll

Porous Pipe is a rubber pipe designed for varied irrigation purposes. It should be used at a pressure of between 0.3-0.8 bar. The maximum run length is 50 metres and the output is 4 litres per hour per metre.

Use instead of porous pipe. Ideal for sloping sites or where areas to be watered are at different levels. Even output at pressures ranging from 0.5-3.5 bar. Areas can be linked together using 16mm LDPE pipe. Use 16mm fittings.

Sprinklers, Spray Guns & Lances

We stock a range of professional sprinklers, spray guns and lances for the landscaping trade.

Aluminium Lance
60cm

Metal soft rain lance with valve, rose and coupling.

Aluminium Telescopic Lance
135cm

Extendable lance from 1.6m - 2.8m for watering hanging baskets. Complete with valve, rose and coupling.

Alloy rose large
60mm X 3/4"

Soft rain rose.

Filter washer
3/4"

Metal ball valve
3/4"

Aluminium Pistol
Adjustable nozzle and trigger

Six function spray gun
Rubber Grip

Sled base sprinkler unit Part Circle Sprinkler

Galvanised sled base unit, complete with brass sprinkler and hose fittings. This is fitted with a robust part or full circle operation. Adjustable height, range and spray.

Working pressure: 1.5 - 4 bar.

Radius: 12.5m @ 2 bar.

Output: 14.2l/min @ 2 bar.

Sled base sprinkler unit metal Rotoframe Sprinkler

Galvanised sled base unit, complete with brass sprinkler and hose fittings. This is fitted with a popular robust sprinkler delivering a full circle of even spray. Will operate under lower pressure than the Part Circle sprinkler we also offer.

Working Pressure: 0.5 - 2 bar.

Dia. Coverage: 13m @ 1.5 bar.

Output: 13.8l/min @ 1.5 bar.

Tripod sprinkler unit Part Circle Sprinkler

Adjustable height tripod unit, complete with brass sprinkler and hose fittings. This is fitted with a robust part or full circle operation. Adjustable height, range and spray.

Working pressure: 1.5 - 4 bar.

Radius: 12.5m @ 2 bar.

Output: 14.2l/min @ 2 bar.

Tripod sprinkler unit Rotoframe Sprinkle

Adjustable height tripod unit, complete with brass sprinkler and hose fittings. This is fitted with a popular robust sprinkler delivering a full circle of even spray. Will operate under lower pressure than the Part Circle sprinkler we also offer.

Working Pressure: 0.5 - 2 bar.

Dia. Coverage: 13m @ 1.5 bar.

Output: 13.8l/min @ 1.5 bar.

Pond Liners

Pond Liners

Top quality 0.75mm Rubber pond liners that are UV stable, virtually imperishable and unaffected by sunlight and frost.

Suitable for lakes, ornamental and wildlife ponds. To calculate the size of liner required:

(max. pond length + 2 x depth) x (max. pond width + 2 x depth)

Bespoke, made to order liners are also available - please ask for details.

3m w x per cut mtr length

5m w x per cut mtr length

7m w x per cut mtr length

Pond Liner Underlay
260 gm/sqm 2m x 30.5m Roll
600mm

Protective matting to prevent damage from stones etc.
Rot proof, heavy duty matting.

PLANTING GUIDELINES

Timing

Bare-rooted and rootballed trees and plants normally become available during November and planting continues until March. However, if there is a cold spring then the bareroot planting season can extend into April – conifer types take more readily to late planting than other varieties. Container grown plants and trees can be planted all year round.

Pre-Planting Preparation

Whether your plant is container grown or bareroot it is important that roots are kept moist before planting. Barerooted plants should be kept in their bags until just before planting. Do not set out long sections of hedging or trees leaving the roots exposed. If planting cannot be done within a week of delivery bareroot plants should be heeled into the ground.

Pre-Planting Preparation

Dig the hole one and a half times the width of the container/ roots/rootball. Loosen the soil at the bottom of the hole and mix in a quantity of Tree & Shrub planting compost. We recommend Mycorrhizal Fungi (Rootgrow) is used on all planting projects and it is now that you put a small quantity at the bottom of the hole if you are planting container or rootballed plants. (When planting bareroot plants Rootgrow is mixed into a 'slurry' and the roots are dipped into the mixture).

Remove the pot from container grown plants (do not remove hessian or wire from rootballs) and position so that the soil level is the same as it was in the container or nursery. Planting deeper than this will kill most trees. (Staking should be done at this point, before back filling – see Staking.) The backfill should be a mixture of soil and Tree & Shrub compost. Fertilizer could also be added to the backfill – Growmore in the Summer or slow-release such as Enmag during the Winter. The backfill should be gently compacted ensuring there are no air pockets around the roots.

Planting bareroot whips: When planting through grass, first make a vertical cut into the turf. Then insert your spade to full depth at the base of the cut, lever back on the spade handle. The cut will now open up. Lift the spade blade slightly and put the plant behind the spade to the bottom of the hole. Slip it round to the centre of the cut, pull up slightly to the original soil level mark and tread in firmly, keeping the plant upright. If planting in loose soil there is no need to make the vertical cut.

Pruning

For best results trees and bareroot hedging should be pruned back at the time of planting. Up to a third of the growth can be cut back but even a small amount will be a great help. Plants that are dug up from open ground unavoidably lose some of their roots. Pruning readjusts this balance, ensuring a greater root-to-shoot ratio and ultimately a better survival rate. Pruning means your hedge will bush out quicker and your trees will have a fuller crown a faster trunk growth. Pruning back container grown plants is not so critical.

Staking /Anchoring

Any single stem trees over 150cm will need to be secured. Staking is the cheapest option but anchoring systems are more pleasing to the eye as nothing shows above the surface. Stakes are driven firmly into the ground prior to backfilling, avoiding any roots. Normally container or rootballed trees are double staked with a cross-rail, belt and rubber pad. (See image 1) Bare-rooted trees are single staked with the stake running alongside the tree trunk and secured with a block and buckle-tie. (See image 2) Don't worry if the tree bends and sways in the wind but if the rootball rocks or moves the tree will need re-staking or the roots will not establish properly. Stakes should be removed after the third season as this will allow the tree to take the strain of the wind itself, strengthening the stem and encouraging further root growth. Anchoring systems are simple to use and very effective, even on large mature trees. Please ask for more information.

PLANTING GUIDELINES

Protection

Depending on the situation your plants or trees may need protection from a range of pests. Silvitube Guards or Spirals of 60cm will protect from Rabbits, 90cm Silvitube Guards from Muntjac deer and Hares, 120cm from Roe deer, 135cm from Fallow deer and 150cm from Red deer. Stakes will be required for the Silvitubes and bamboo canes for the Spirals. If you are planting in parkland you are likely to need classic metal protectors.

Grazers is a liquid pest deterrent that is sprayed on to the plants using a hand or knapsack sprayer. It lasts for up to six weeks and is effective against damage from rabbits, deer, pigeons and mice and voles. The liquid is high concentrate and is an excellent choice if you or your client don't like the sight of tree or shrub shelters. It is also suitable for edible crops although you will need to allow one week's interval between treatment and harvest.

Topbuxus Health-Mix offers first-rate protection from Box Blight. Please ask for more information or visit www.topbuxus.co.uk

Top-dressing

Apply 'Fish, Blood and Bone' or 'Growmore' in March/April at the rate of 75g/m² or approximately a flat handful. Avoid top dressing in late summer as this will produce a flush of weak growth late in the season that is likely to be damaged by frost as we move in to the Autumn.

Aftercare

It is very important that your hedge or trees are kept free of weed competition by spraying or using mulching materials until it is well established. Keep weeds and grass away from the base of the tree or hedge to a minimum distance of 50cm. When trimming a hedge as it matures keep it slightly wedge shaped (wider at the bottom). This ensures that light will reach the hedge all the way down and will prevent it becoming thin at the bottom.

Monitor Spiral Guards and Tree Shelters to ensure they are not strangling the plants as they begin to grow. Check trees that have been staked and tied to loosen the tie as the trees grow and to make sure the stake is not rubbing on the trunk.

Mulch

Mulch will suppress weed competition for water and will also help to retain moisture in the ground. Apply mulch to a depth of 75mm allowing a 50mm gap around the base of the trunk

Watering

Watering is a science and fail-safe rules cannot be defined. However, watering in the first season is vital. Use the 'Squeeze Test' to check the moisture on a regular basis and water accordingly. Watering tubes can be used for trees and pressure compensated dripline is a good choice for hedges (please contact Kingsdown Nurseries for details.) If the first summer is a hot one give the plants a good soak twice a week. Although rain is helpful, don't assume that your plants have had enough water. During the summer the ground can become very hard and even torrential rain can simply run off the surface without penetrating deep enough for the plants to take it in. Always check using the 'Squeeze Test'.

Over Watering

Over watering is easy to do and is the cause of many failures, especially Taxus. If the ground is saturated there will be very little Oxygen in the soil leading to suffocation and root decay. Plants need Oxygen as much as they need water. Plants that are dying because of overwatering can have very similar symptoms to a plant that is dying of drought. This is simply because the roots are dead and not supplying the plant with any water! This can of course lead us to vigorously continue watering when in fact we are actually aggravating the situation. Always check using the 'Squeeze Test' before watering.

THE SQUEEZE TEST

Dig down 20cm, take a handful of soil & squeeze	
If the soil...	then...
Doesn't bind at all and falls through your fingers	Water urgently
Does bind but then crumbles when touched	Apply water and check again soon
Binds and holds	No need to water
Binds and free water squeezes out	Too wet... allow to dry out

SUNDRIES REQUIRED

PLANTS	Stakes (per tree)	Ties	Pad/block	Strapping	Half -Round Rail 85mm x 90cm
Rootballed Hedge					
NCHM, & Transplants up to 100/125cm					
Feathered whips & trees 125 to 250cm	1 x 1.2x50mm	38cm Buckle Tie			
Fruit - 1/2 std	1 x 1.2x50mm	38cm Buckle Tie			
BR 6/8 to 12/14	1 x 1.65x60mm	45cm Buckle tie for 6/8 to 10/12, 60cm Heavy Duty for 12/14			
BR 14/16	1 x 2.4x75mm	60cm Heavy Duty Buckle tie			
RB or container 8/10 to 12/14	2 x 1.65x60mm		38mm pad or block	1m worth of 38mm	1 x cut piece
RB or container 14/16 to 20/25	2 x 2.4x75mm		50mm Pad	14/16 to 16/18 same as above 18/20 to 20/25 use 50mm nylon reinforced	1 x cut piece
RB or Containter 25cm girth +					
Pleached Trees (RB or Container) 12/14 to 16/18	2 x 1.65x60mm	Cable ties - 8 required per tree (only sold as full packs of 100)	50mm Pad	1m worth of 38mm	1 x cut piece
OTHER SUNDRIES info.					
Shelter Height	60cm	90cm	120cm	135cm	150cm
Protect from	Rabbits & hares	Muntjac deer	Roe deer	Fallow deer	Red Deer

SUNDRIES REQUIRED

	Tree Anchoring	Spirals	Canes	Rootgrow	Tree & Shrub Compost (per tree)
				20g per m	1 bag per 3 linear meters
		YES	90cm	YES	
		YES		YES	
		Sometimes		YES	1/4 bag
				YES	1/4 bag for 6/8 to 10/12 1/2 bag for 10/12 to 12/14
				YES	1/2 bag
				YES	1/2 bag
				YES	1 bag
	Advisable			YES	1 bag
			90cm canes - allow 4 per tree	YES	1 bag
		Shelters are normally used for forestry and are not really suitable for hedging as the lower growth will be restricted.

QUESTIONS

Having perused this book, you may still have questions or be undecided as to whether Kingsdown is really the right nursery for you. Here, we've attempted to pre-empt some of your questions. They are just the sort of things we should like to know if we were trying a new supplier for the first time.

- **Payment terms.** Government bodies and Public Institutions are automatically entitled to a credit facility. Credit is also available on application to other buyers (subject to satisfactory credit checks) and can be requested by telephone 01793 700 997 or email accounts@kingsdown-uk.com Some previous trading history is required before a credit account is opened. Where credit facilities are not in place payment must be made before delivery.
- **What happens if something goes wrong?** When it's plain sailing and all is going smoothly, everyone is happy- especially us. It's when issues arise that we find suppliers show their true colours. Will that supplier try to wriggle away and win the dispute, ultimately losing your trust? Or will they take ownership of the error, look ahead, work with you, take your view on board and turn the situation round? We sometimes make mistakes. We also see putting them right as an opportunity to build enduring and lasting relationships with our customers that perhaps couldn't be achieved in any other way. As one customer put it... *'Even when things have not quite gone to plan Kingsdown have always had a solution and been very quick to resolve any issues albeit this has been on a very rare occasion.'*
- **Are Kingsdown's plants guaranteed?** As follows:
 - 1) We promise to supply stock that is structurally sound, healthy and true-to-type. If we get this wrong, we will supply you with free replacements or a refund as long as you let us know within 48 hours of delivery.
 - 2) If your plant dies for *no apparent reason* within one year of planting we may replace it once, like for like* free of charge, or refund the cost of the plant, at our discretion. However, we do require that you let us know if the plant appears to be struggling before it is actually dead. We may make a site visit allowing us to establish the cause of the problem, to offer a solution before it is too late or advise on the replacement.
 - 3) If failure is due to natural causes e.g. flooding, extreme cold, pests, or from negligent maintenance or planting methods, unsuitable soil conditions or location, then we reserve the right not to replace the plant.
 - 4) Any dealings regarding replacements etc. will be with you, our trade customer, not your client.

*The term Like for Like means the same species and specification as originally supplied and does not include replanting costs or any other consequential losses.
- **I am a tradesperson. What if my client tries to go direct to Kingsdown?** As a supplier to the trade we would normally expect our customers to make a profit on the plants we supply. Occasionally our customers' clients object to this and try to find out what our selling prices are or to buy from us direct. As we are used to doing business with professionals it is normally very easy for us to recognise these people. We politely tell them we cannot discuss any details and that they will need to go through their trade supplier for prices and information. Protection of our wholesale customers is very important to us and we do all we can to ensure there are no issues from this quarter. For clarification as to who we do supply please see pages 16 to 25.
- **Can my client visit the nursery and will Kingsdown advise them on my behalf?** Your client may visit our nursery but only if accompanied by yourself. Kingsdown is not available to liaise, advise or discuss project details with your clients.
- **Are Kingsdown growers or traders?** We have been growing trees and shrubs since the early 1980's and still continue to do so - now along with some large topiary. However, the majority of what we supply is now grown off-site by our partners in this country and the Continent.
- More of your questions may be answered in the terms opposite but if there are any we've not covered we'll be very glad to help. 01793 700 997 or sales@kingsdown-uk.com

TERMS AND CONDITIONS

1. This catalogue cancels all previous lists of the products shown.
2. We reserve the right to vary specifications and prices without notice. It is the responsibility of the purchaser to determine the exact price of each item at the point and time of purchase.
3. Payment can be made by credit/debit card, bank transfer (BACS), cash or cheque. See below for our bank details:
Account: 10 10 46 73
SORT: 16 33 11
4. Credit facilities are available and an application form can be requested on 01793 700 997 or accounts@kingsdown-uk.com
We do not usually open credit accounts for customers who have no trading history with us.
5. Any customer presenting us with a cheque which is returned by their bank will be charged by us a sum of £10.00 to cover the cost of bank charges and administration. The full amount must then be settled in a way satisfactory to us and all further transactions thereafter must be carried out in cash or by electronic means.
6. Where credit is given, payment is due on the 28th of the month following the month of Invoice. In default of payment, interest may be added to the outstanding account calculated at a rate of 2% per month.
7. New customers are requested to pay for goods before delivery. Exceptions would be Government Bodies and other Public Institutions.
8. In the event of the existence of an overdue account, we reserve the right to withhold future deliveries until such time as all outstanding accounts have been paid.
9. Title to the goods does not pass to the purchaser until payment is made in full of the amount on the Invoice.
10. Deliveries will be off-loaded at the roadside. If the customer orders the delivery vehicle off the public highway this will be at the discretion of the driver and entirely at the customers' risk.
11. All consignments are to be checked and signed for by the purchaser and any complaints regarding quality, size or quantity should be made in writing within 3 days. The purchaser must at all times make sure that the items are suitable for their use and meet with their requirements and purpose, and we cannot be held responsible in any way in that regard. The purchaser is fully responsible for the health, care, maintenance and welfare of all plants after delivery.
12. Items will not be held in pursuance to an order for more than 30 days without payment being made on a Pro-forma Invoice basis.
13. Time is not the essence of the contract or a term of the contract. We will not be liable for delays in delivery of any loss, consequential or otherwise that may occur as a result of any delay.
We will do our utmost to fulfil any delivery dates and times.
14. The placing of an order with Kingsdown Nurseries implies acceptance of the above terms.
15. Kingsdown Nurseries are strictly a trade only supplier and do not supply the general public.
